Sequence 9, Application US/09866379

Patent No. 6855365

GENERAL INFORMATION:

APPLICANT: DIVERSA CORPORATION

APPLICANT: SHORY, Jay

APPLICANT: SHORY, Jay

APPLICANT: BARTON, Nelson

APPLICANT: GRAY, Kevin

TITLE OF INVENTION: RECOMBINANT BACTERIAL PHYTASES AND USES THEREOF

FILE REFERENCE: DIVERIATOO-7

CURRENT APPLICATION NUMBER: US/09/866,379

CURRENT FILING DATE: 2001-05-24

FRIOR FILING DATE: 1999-04-13

FRIOR PILING DATE: 1999-04-13
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1901

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          용
                                                                                                                                                                                                                                                                                                                                                                                          Sequence 341, Application US/09489039A

Patent No. 6610836

GENERAL INFORMATION:
APPLICANT: Gary Breton et. al
APPLICANT: Gary Breton et. al
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO KLEBSIELLA
TITLE OF INVENTION: PNEUMONIAE FOR DIAGNOSTICS AND THERAPEUTICS
FILE REPRENCE: 2709.200401
CURRENT APPLICATION NUMBER: US/09/489,039A
CURRENT FILING DATE: 2000-01-27
PRIOR APPLICATION NUMBER: US 60/117,747
PRIOR FILING DATE: 1999-01-29
NUMBER OF SEQ ID NOS: 14342
SEQ ID NO 341

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 540
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         720
                                                              Improving the nutritional value of phytate-containing foodstuffs, using phytase enzymes which catalyze the liberation of inorganic phosphate from
                                                                                                                                                                                       The present sequence encodes a phytase enzyme from Escherichia coli B. The enzyme catalyses the liberation of inorganic phosphate from the phytate in phytate-containing foodstuffs and can thus be used to improve the nutritional value of phytate rich ingredients
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  40

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ઠે
                                                                                                                            release biocompatible composition which comprises an agent (enzymes such as phytase, amylase, esterase, protease) that assists in digestion. The biocompatible composition is effective upon oral consumption and release in the digestive tract of a subject. The distary aids are useful for delivering enzymes, therapeutics, medicine and agents to an organism. The use of enzymes and other agents in digestive aids of livestock or domesticated animals not only improves the animal's health and life expectancy but also assists in increasing the health of livestock or the production of foodstuffs from livestock. The present sequence is Escherichia coll phytase DNA

The patent discloses recombinant bacterial phytase from Bscherichia colicated apply phytase. The enzyme has phytase activity and improved procease tolerance when compared with wild-type phytase. It has improved procease tability at low pH. The recombinant phytase is useful for improving the activity at low pH. The recombinant phytase is useful for improving the around value of phytate-containing foodstuffs and subsequently improving the growth performance of an organism that consumes it, in treating animal digestive systems, in feed treatment processes and for in vitro purposes related to research, discovery and development. They are also used for generating recombinant digestive system life forms, for producing or manufacturing alcoholic and non-alcoholic drinks based on the use of moulds, grains and/or plants, in biopulping and bio- bleaching where a reduction in the use of environmentally harmful chemicals that are traditionally used in the pulp and paper industry is desired and in the reduction or possible elimination of the need for mineral supplements, enzymes or therapeutic drugs for animals from the deal the increasing the amount calories and nutrients present in the feed.
                                                                                                                                                                                                                       New bacterial phytase for e.g. improving the nutritional value of phytate -containing foodstuffs and subsequently improving the growth performance of an organism that consumes it, or in treating animal digestive systems.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              GTGCGTGCTCCAACCAAGGCCACGCAACTGATGCAGGATGTCACCCCAGACGCATGGCCA 180

Isolated Escherichia coli polynucleotide encoding a modified phytase enzyme, useful in the production of animal feed, for improving the nutritional value of phytate-containing foodstuff and for enhancing digestion in humans and animals.

2003-040002/03

P-PSDB; ADA19446.

Claim 2; Fig 1; 62pp; English

The invention relates to an isolated Escherichia coli polymuclectide encoding a phytase enzyme appearing as ADA19450 and having amino acids modification from Wesb. (0.000 Mess). (0.000 Mess) (0.000 Mess). (0.000 Mess) (0.000 Mess). (0.000 Mess) (0.000 Mess). (0.000 Me invented method improves thermal tolerance and protease stability. It also improves the feeding value of phytate rich ingredients. The present sequence encodes E. coli B wild-type phytase.

The invention relates to a method for producing phytase that involves providing a nucleic acid encoding phytase derived from a bacteria, and expressing the nucleic acid in a yeast under conditions that allow expressing the nucleic acid in a yeast under conditions that allow we expression of the enzyme in the yeast. The invention also relates to modified phytase enzyme which has improved thermal tolerance and protease is stability at low pH. The phytase enzyme can be used in foodsruffs to improve the feeding value of phytase enzyme can be used in foodsruffs to improve the feeding value of phytase enzyme and fishes, and in diet of numerous animals including mammals, fowls and fishes, commercially significant mammals such as pigs, goats, laboratory rodents, commercially significant avian species such as chicken, ducks, doves, parrot, etc., commercially farmed fish such as suppy, zebrafish, molly, swordtall, etc., in dough making and baking, in dietary aids for animals. The method provides easy manufacture of the active ingredient loaded biocompatible incorporated in to the dietary aid is safe for animals. The present sequence is Bscherichia coli B phytase DNA.
                           Producing phytase, involves providing nucleic acid derived from bacteria encoding polypeptide having phytase activity, and expressing nucleic acid in yeast.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     241 GGACATTACCAACGCCAGCGTCTGGTAGCCGACGGATTGCTGGCGAAAAAGGGCTGCCCG 300

```
The present sequence is that of a polymucleotide encoding the Escherichia coli B phytase. The present invention relates to a novel formulation, comprising at least one polypeptide having phytase activity, where the polypeptide is a modified sequence (ARE75412) derived from the cargyme, comprising a series of mutations, improves the thermal tolerance and protease stability of the protein. The specification also claims a pharmaceutical composition; a kit; an immobilized phytase; a fertilizer or soil additive; a liquid supplement for preventing muscle cramps; a chydrating agent; a tissue culture or cell culture media; and a plant food additive, all comprising the novel phytase, and a method of reducing collution and increasing nutrient availability in an environment or environment sample by degrading environmental phytic acid. The novel caryme is a dietary supplement useful for treating, preventing or reversing osteoporosis or bone loss, and preventing muscle cramps. The cliquid supplement is useful for preventing muscle cramps. The cliquid supplement or environmental phytic acid, where the environmental sample by degrading environmental phytic caid, where the environment or

Producing phytase, involves providing nucleic acid derived from bacteria encoding polypeptide having phytase activity, and expressing nucleic acid
                        Disclosure; Page; 74pp; English.
```

The invention relates to a method for producing phytase that involves providing a nucleic acid encoding phytase derived from a bacteria, and expressing the nucleic acid in a yeast under conditions that allow expression of the enzyme in the yeast. The invention also relates to modified phytase enzyme which has improved thermal tolerance and protease stability at low ph. The phytase enzyme can be used in foodsatuffs to improve the feeding value of phytase enzyme and fishes, commercially commercially and pathons and and in diet of numerous animals including mammals, fowls and fishes, commercially significant mammals such as plygs, goats, laboratory rodens, commercially significant avian species such as Ghicken, ducks, doves, parrot, etc., of commercially farmed fish such as guppy, zebrafish, molly, swordtail, commercially farmed fish such as guppy, zebrafish, molly, swordtail, commercially farmed fish and loading efficiency. The phytase composition, higher yields and loading efficiency. The phytase incorporated in to the dietary aid is safe for animals. The present sequence is Escherichia coll w phytase mutant DNA. Note: The present sequence is not shown in the specification but has been derived from the sequence is some of the active index and a phytase composition, and shown in the specification but has been derived from the sequence is some of the active index and a phytase commercially sequence is some of the active index sequence is some of the sequence of the active index sequence is some sequence of the shown in the specification but has been derived from the sequence of the sequ

The invention relates to a method for producing phytase that involves providing a nucleic acid encoding phytase derived from a bacteria, and expression of the mucleic acid in a yeast under conditions that allow expression of the enzyme in the yeast. The invention also relates to modified phytase enzyme which has improved thermal tolerance and protease stability at low ph. The phytase enzyme can be used in foodstuffs to improve the feeding value of phytase right ingredients, and in diet of numerous animals including mammals, fowls and fishes, commercially significant avian species such as pigs, goats, laboratory rodents, commercially significant avian species such as Ghicken, ducks, doves, parrot, etc., commercially farmed fish such as guppy, zebrafish, molly, swordtall, ctc., in dough maxing and baxing, in dietary aids for animals. The method provides easy manufacture of the active ingredient loaded biocompatible composition, higher yields and loading efficiency. The phytase incorporated in to the dietary aid is safe for animals. The present equence is Kangaroo rat Escherichia coli phytase mutant DNA. Note: The present sequence is the phytase mutant bas been derived
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Producing phytase, involves providing nucleic acid derived from bacteria encoding polypeptide having phytase activity, and expressing nucleic acid in yeast.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ũ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        O' donoghue

the foll antiennes sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense conding a polypeptide whose expression is inhibited by the antisense collipseptide or its fragment whose expression is inhibited by the antisense antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide of is producing the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation, (7) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway required for proliferation, or that inhibits cellular proliferation; (8) identifying a gene required for cellular proliferation or the biological pathway in which a proliferation-required gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an compound's activity; (11) a culture comprising strains in which the gene compound's activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent to which each of the strains is present in a culture or collection of

strains; or (13) identifying the target of a compound that inhibits the proliferation of an organism. The antisense nucleic acids are useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is one of the target not form prot form the sequence data for this patent did not form part of the printed specification, but was obtained in fit.wipo.int/pub/published_pct_sequences

The invention relates to recombinant modified Appa phytases having

modified phytase activity. The Appa phytases are derived from a mature

Escherichia coll Appa phytase designated EBC1882 (see AbL16120), and

comprise subsitutions at least one of residues 26, 43, 46, 54, 73, 113,

CC (126, 184, 228, 384 or 410, or at a residue located within 5 residues of

those listed above. The invention also encompasses polymucleotides

c nocding a modified Appa phytase and which further encodes a secretion

signal sequence operable in Bacillus subtiliss) comprising the

colymucleotide sequences; and a method for the production of the modified

Appa phytases. The invention also discloses a method of producing an

c and host calls (preferably Bacillus subtiliss) comprising the

colympetide having phytase activity; a method of producing a heterologous

colympetide having phytase activity; a method of producing a neterologous

colympetide having phytase activity; a method of producing a modified

Appa phytase; and animal feed comprising calls, spores or plant parts,

including seeds, capable of expressing an animal feed additive,

modified Appa phytases are useful as an animal feed additive,

modified Appa phytases are useful as an animal feed additive,

particularly in feeds for non-ruminant livestock such as pigs and poultry

which lack the digestive enzymes for extracting phosphorus from phytate

c modified Appa phytases are useful as an animal feed additive,

particularly in feeds for non-ruminant livestock such as pigs and poultry

which lack the digestive enzymes for extracting phosphorus from phytate

c modifications For example, they can be used in the plant seed which is

an important source of phosphorus. The modified Appa phytases also have

c applications For example, they can be used in the search of the control and mutritional supplements); in wet grain milling; in osteoporosis) and renal calcul (kidney stones); in food products and in the removal products and entented beneval products, and in the removal product
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            120

The patent discloses recombinant bacterial phytase from Escherichia coli (12 apph phytase. The enzyme has phytase activity and improved thermal tolerance when compared with wild-type phytase. It has improved protease stability at low ph. The recombinant phytase is useful for improving the mutritional value of phytate-containing foodsruffs and subsequently improving the growth performance of an organism that consumes it, in treating animal digestive systems, in feed treatment processes and for in vitro purposes related to research, discovery and development. They are producing or manufacturing alcoholic and non-alcoholic drinks based on the use of moulds, grains and/or plants, in biopulping and bio- bleaching where a reduction in the use of environmentally harmful chemicals that are traditionally used in the pulp and paper industry is desired and in the reduction or possible elimination of the need for mineral supplements, enzymes or therapeutic drugs for animals from the daily feed thus increasing the amount calories and nutrients present in the feed. The present sequence is a DNA encoding E. coli appA phytase wild type protein

containing foodstuff by contacting the phytate-containing foodstuff with containing foodstuff by contacting the phytate-containing foodstuff with a pure bibytase enzyme mutated bipytase (where the phytase enzyme catalyzes the liberation of inorganic phosphate from the phytate in the phytate. Containing foodstuff, a method to produce an animal feed containing a microbial phytase (comprising culturing the plant cell, plant part or plant under conditions where the nucleotide sequence is expressed and converting the plant cells, plants or plant into a composition for animal converting the plant seeds, plant cells, plant parts or plants in admixture with a phytate-containing converting the plant cells, plant parts or plants in admixture with a phytase enzymes codistiff, a method to treat a human or an animal able to benefit from digestive enhancement by the activity of an exogenous phytase enzymes comprising administering to the human or animal the plant seed, plant cells, plant parts or plants of a transgenic plant which is modified to contain an expression system which expresses a nucleotide sequence contain an expression system which expresses a nucleotide sequence comprising a heterologous nucleic acid sequence encoding a polypeptide having phytase activity. The phytate enzyme is useful for improving the nutritional value of phytate-containing foodstuff, in the production of animal feed and for enhancing digestion in humans and animals. The invented method improves thermal tolerance and protease stability. It also improves the feeding value of phytate rich ingredients. The present sequence represents the E. coli KI2 appA gene encoding wild-type phytase.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         용
                                                                                                                                                                                                                                                                                                                                                                                                                           The invention discloses a new isolated or recombinant nucleic acid which encodes a polypeptide having a phytase activity. Also claimed is a nucleic acid probe, an amplification primer sequence pair, an expression cassette comprising the nucleic acid, a transgenic non-human animal or plant, or its seed, comprising the nucleic acid, a nanisense oligonucleotide, inhibiting the translation of a phytase message in a cell, a heterodimer comprising the polypeptide and a second domain, an array comprising immobilised polypeptide or nucleic a phytase message in a cell, a heterodimer comprising the polypeptide and a second domain, an array comprising immobilised polypeptide or nucleic a second domain, an array comprising a granule edible enzyme delivery cartix, an edible pellet comprising a granule edible carrier and the polypeptide, a feed composition, a soybean meal, isolating or identifying the polypeptide, determining whether a compound binds to the polypeptide, determining whether a compound binds to the polypeptide, determining whether a compound binds to the polypeptide, thermotolerance or thermoetability of the phytase polypeptide, increasing the resistance of the phytase polypeptide to enzymatic inactivation in a digestive system and processing of corn and sorghum kernels. The phytase cativity comprises catalysis of phytate (myo-inositol-hexaphosphate) to inositol and inorganic phosphate and is thermotolerant. The nucleic acid is useful in hyptate digestion. The sequence presented is the DNA case an aid in phytate digestion. The sequence presented is the DNA
                                                                                                                                                                                                                                                                                                                                        * nucleic acid encoding a polypeptide having phytase activity, useful
improving the feeding value of phytate rich ingredients or as an aid
phytate digestion.
                                                                                                                                                                                                                                                  ä

The invention relates to a method for producing phytase that involves providing a nucleic acid encoding phytase derived from a bacteria, and expressing the nucleic acid in a yeast under conditions that allow expression of the enzyme in the yeast. The invention also relates to modified phytase enzyme which has improved thermal tolerance and protease stability at low pH. The phytase enzyme can be used in foodstuffs to inmprove the feeding value of phytate rich ingredients, and in diet of numerous animals including mammals, fools and fishes, commercially significant mammals such as pigs, goats, laboratory rodents, commercially significant avian species such as chicken, ducks, doves, parrot, etc.,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Producing phytase, involves providing nucleic acid derived from bacteria encoding polypeptide having phytase activity, and expressing nucleic acid in yeast.

```
commercially farmed fish such as guppy, zebrafish, molly, swordtail, etc., in dough making and baking, in dietary aids for animals. The method provides easy manufacture of the active ingredient loaded biocompatible composition, higher yields and loading efficiency. The phytase incorporated in to the dietary aid is asfe for animals. The present sequence is Escherichia coli K12 apph phytase DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          260

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                       US-10-601-319-2
